

The Error Function

Jens S. K. Jensen

March 13, 2019

1 Introduction

This report

2 Analytical solution

The error function $\text{erf}(x)$ is defined as

$$\text{erf}(x) = \frac{2}{\sqrt{\pi}} \int_0^x e^{-t^2} dt. \quad (1)$$

3 Numerical solution

The error function can also be found by numerically solving the following differential equation:

$$u'(x) = \frac{2}{\sqrt{\pi}} e^{-x^2} \quad (2)$$

with the initial condition

$$u(0) = 0. \quad (3)$$

4 Plot visualization

Both the analytical and numerical solutions are shown in figure 1. The analytical solution (`gsl erf(x)`) is GSL's implementation of equation 1, while the numerical solution (`myerf(x)`) is computed by integration equation 2 and 3.

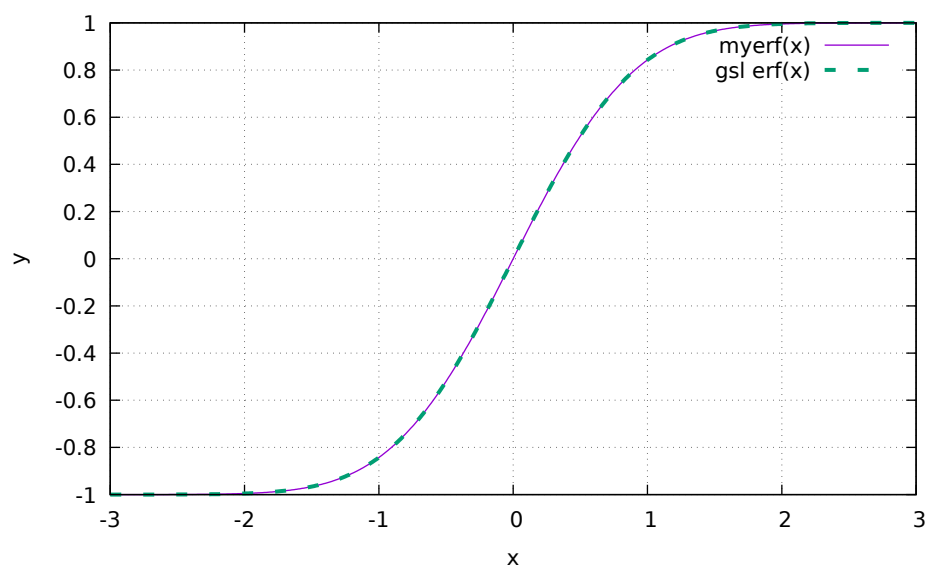

Figure 1: Numerical and analytical representations of the error function.
